Press Release

Innovation and timeless design

EYCOS E 50.12 PVR

The Austrian manufacturer SATFORCE presents a new innovative hard disk receiver the EYCOS E 50.12 PVR. This Set Top Box is a must for people preferring a clear design, an easy handling and an equipment standard that is much above average. Equipped with two CI-slots the receiver is ready for reception of pay-TV channels, as well as free-to-air channels.

Two satellite tuners enable recording up to four programs on one transponder at the same time by using one tuner. You can also use both tuners for two independent recordings. But that is not all you can do with the EYCOS E 50.12 PVR. You can also watch a further program live or from the hard disk. The receiver is distributed with a built-in 80 GB hard disk which is enough for recording up to 44 hours. If you need more space you can swap the hard disk easily. Hard disks up to 250 GB are supported by the receiver. The built-in USB 2.0 interface allows a fast exchange of the recorded videos between the Set Top Box and the PC where you can create your own CDs or DVDs.

Of course the EYCOS E 50.12 PVR offers also features like time shifting, record settings in the electronic program guide (EPG) or the automatic record from one of the 40 timers.

The supported DiSEqC protocols 1.0, 1.1, 1.2 and 1.3 (USALS) make the receiver work with a broad range of antenna systems: single antennas, multifeed antennas or DiSEqC/STAB-rotors. These multifeed solutions or motorized antennas offer a huge program variety and the E 50.12 PVR can store up to 8000 channels.

On the rear side it is equipped with one S-Video output and an optical output for your Dolby-Digital home entertainment system for a high quality signal output.

Remote controls of such complex Set Top Boxes must be equipped inevitably with many function keys, where the buttons are clearly arranged and permit fast access to the different functions. If you prefer an easier handling you can use the additional remote control which is only equipped with the most important keys.

Very short switching times, the display of the individual channels on a mosaic screen with up to 16 pictures, the picture-in-picture function and the animated 3D-menue are further highlights of the EYCOS E 50.12 PVR.

SATFORCE Kommunikationstechnik GmbH

SATFORCE Kommunikationstechnik GmbH is based in Austrian Hallwang (Salzburg) and is a leading company in the field of satellite communication. The new label EYCOS from SATFORCE has secured its position in the market in a very short time. EYCOS products are only distributed by selected and trustworthy dealers in different countries and so an excellent service and support is guaranteed.
